

## Activities

Today you are going to be using a different tool to make a science quiz all about light.

On Purple Mash, open 2Quiz (Home>Computing>2Quiz>Launch app).

There is a video which introduces how to use this programme. I would like you to start by watching this video as it teaches you all of the functions that you can use in 2Quiz, such as adding new questions, question types, adding voice-overs and sounds, copying questions and more.

You need to click here to watch the video:

I'd like you to make your own quiz today all around the topic of light and colour. You need to make at least 5 questions (but you can do more if you like), and use at least three different question types.

Your quiz will also need a title screen and instructions.

When you have finished looking at the introduction video, click on the grey + button at the bottom left to add a question. The question type selector will open. Clicking on the pictures gives you a summary of what the question type is.

Each question type has a corresponding help video which you can watch if you are unsure.

Don't forget to save your work! Save it to the Year 6 folder please, so I can see it easily.

Once you have completed several questions and saved your work, you should decide upon the Quiz mode. There are four modes, each with corresponding videos. The chosen mode determines whether the quiz is presented like a conventional test, like a learning aid or even like a game show. You can try playing your own quiz in each of the modes to decide which one to use.

Then add a title screen with instructions.

I will share all the completed quizzes on a display board so you can try them out.
