

Do you remember our English work when we designed a “Cracking Contraption”?

This week we are going to use that idea in our animations!!!

Open the following link: <http://www.wallaceandgromit.com/films/cracking-contraptions>

Watch the ‘Soccamatic’ video to remind yourself of the Cracking Contraptions.

Do you remember how the Wallace and Gromit animations were created?

They were created using cameras to shoot small changes one frame at a time-this is called ‘stop motion’ animation. The Wallace and Gromit cartoons are a great example of this type of animation.

You are going to create your own Cracking Contraptions animation in 2Animate.

Watch the Wallace and Gromit video clips for ideas and then think about your own Cracking Contraption you can animate. You can use the same idea that you used when we wrote our explanatory texts a few weeks ago if you like or you can design a totally new one.

Create your own animation in 2Animate – I have set this as a 2do on Purple Mash. Make sure you use what we have learned during this unit:

- add sound effects
- Use the onion skinning tool to create movement
- Use backgrounds

This animation will be a slightly longer project than previously!
