

**Plants** are living things that grow. Plants stay in one place but they grow and change just like you. Plants have 3 important parts: **roots, stems and leaves**.

Deciduous Trees	Evergreen Trees
<div>A deciduous tree is a tree that sheds its leaves. Deciduous trees change throughout the year.</div> <div><div><div>English oak</div></div><div><div>sycamore</div></div><div><div>horse chestnut</div></div></div>	<div>An evergreen tree is 'ever green.' It is a tree that keeps its leaves on it throughout the year.</div> <div><div><div>Norway spruce</div></div><div><div>Douglas Fir</div></div><div><div>holly tree</div></div></div>

Common Garden Plants

Garden plants are plants that people choose to grow in their gardens. They look after their plants and help them to grow.

Common Wild Plants

Wild plants don't need to be looked after to grow. A wild plant's seeds grow where they fall.
